

Quality Assurance / Research & Development / Testing

Adhesive Films, Inc. provides superior heat activated and pressure sensitive adhesives for thousands of uses, in a wide variety of industries.

Adhesive Films, Inc. is a solvent free manufacturer preserving the environment we have, while providing products suitable for the most extreme ones.

Understanding and meeting your unique needs is what **AFI** is all about.

An industry leader, **AFI** has over 100 years of combined experience! We can assist you by improving your manufacturing techniques as well as offer guidance in solving production problems.

AFI constantly focuses on improvement. If one of our standard products doesn't meet or suit your needs, we'll work with you to develop a product that will meet those requirements.

We offer an array of adhesive products that can bond to textiles, metals, paper, films, foils, foam and even wood. If your product requirements don't fall into a standard category, give us a call and let's talk! We'll work with you to find a solution.

All **AFI** products are of the highest quality — because our reputation is on the line in every inch of product we produce.

Whether you select one of our hundreds of standard products or we prepare a custom designed product to your specifications, you can rest assured that you will have the best adhesive film product on the market.

AFI's goal is to enhance the success of your business.

Our technical expertise and trained staff are ready to assist and support you in achieving this goal!

ASK DR. AFI

AFI's Commitment to Quality Assurance

AFI evaluates and monitors their production with a variety of testing equipment. This testing and monitoring ensures you of a quality product being delivered time after time.

In addition to continuously monitoring all of our production, we also test to simulate usage in your end product for additional assurance and peace of mind. Some of our ongoing testing includes, but is not limited to, the following:

- ◆ Monitoring the melt flow index of raw materials.
- ◆ Using a Kofler Bench to determine the melt point of various adhesive films.
- ◆ Performing hydrostatic testing of sealed seams.
- ◆ Measuring the level of bond strength between an adhesive and substrate.
- ◆ Testing and measuring the level of moisture to ensure that the resin is suitable for our extrusion operation.
- ◆ Testing sealed samples under specific environmental conditions.
- ◆ Simulating a variety of testing requirements for your specific needs.
- ◆ Providing written test reports showing the compatibility between our adhesive films and your material.
